

# Platform Support

Recent NVIDIA Container Toolkit releases are tested and expected to work on these Linux distributions:

| OS Name / Version   | amd64 / x86_64 | ppc64le | arm64 / aarch64 <sup>1</sup> |
|---------------------|----------------|---------|------------------------------|
| Amazon Linux 2023   | X              |         | X <sup>2</sup>               |
| Amazon Linux 2      | X              |         | X                            |
| Open Suse/SLES 15.x | X              |         |                              |
| Debian Linux 11     | X              |         |                              |
| CentOS 8            | X              | X       | X                            |
| RHEL 8.x            | X              | X       | X                            |
| RHEL 9.x            | X              | X       | X                            |
| RHEL 10.x           | X              | X       | X                            |
| Ubuntu 22.04        | X              | X       | X                            |
| Ubuntu 24.04        | X              |         | X                            |
| Ubuntu 26.04        | X              |         | X                            |
| Rocky Linux 9.7     | X              | X       | X                            |

## Report Issues

NVIDIA qualification-testing procedures are continually evolving and might miss some problems. [Report issues on GitHub](#), in particular those that occur on a platform listed in the table.

## Other Linux Distributions

Releases can work on more platforms than indicated in the table above, such as distribution versions older and newer than those listed. You can still try them and [report any issue](#) you observe, even if your Linux distribution is not listed.

<sup>1</sup>. The [arm64](#) / [aarch64](#) architecture includes support for Tegra-based systems.

2. For Amazon Linux 2023 on Arm64, a `g5g.2xlarge` Amazon EC2 instance was used for validation. The `g5g.xlarge` instance caused failures due to the limited system memory.
